

Experience The Benefit Code Difference

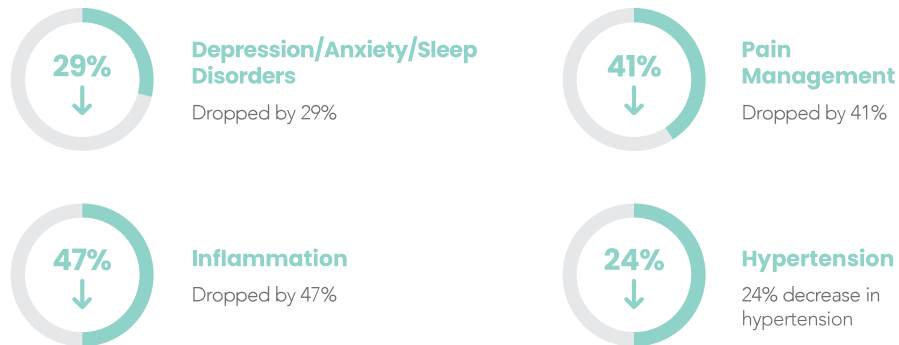

Customized Programming and Comprehensive Communications Transform Employee Health

Everything we do starts with data. We are able to track DIN usage from day one to see real-time changes in disease state amongst employees. This data also enables us to customize programming and communications to target the needs of your team.

We worked with a leading medical device company in Ontario over a five-year period and they experienced dramatic results!

Changes in Employee Health

Working with The Benefit Code has saved thousands of dollars and dramatically impacted the health of our team," says Sandi Young, VP Human Resources.

Industry Knowledge Results in Cost Savings

The Benefit Code achieved **\$230,000** annual cost savings on health insurance for a company of just over 200 employees.

The Benefit Code partnered with a publicly-traded manufacturing company with over 200 union and non-union employees across the country. They had been with their existing broker for 15-plus years. After re-evaluating their plan, they saved the company over \$230,000 each year on their benefit costs—without losing any offerings!
